Animal Systematics, Evolution and Diversity

ASED - Animal Systematics, Evolution and Diversity
New title adopted since January 2012
Formerly, Korean Journal of Systematic Zoology (KJSZ; since 1985)
http://e-ASED.org
The first issue of the Korean Journal of Systematic Zoology (KJSZ) as the official scientific journal for the Korean Society of Systematic Zoology (KSSZ) was published on November 1985 with six articles. During the last 27 years, KJSZ has published 759 original papers of 66 regular issues in 27 volumes until November of 2011. It has also published 40 original papers in 8 special issues resulting in 799 papers in grand total.

Thus, KJSZ has well served as a primary scientific medium for the systematic zoologists in Korea for the last three decades. However, we believe that it is time for the journal to begin a new stage. We are transforming KJSZ into an international journal to serve a wider range of scientific community in East Asian region from the January issue of 2012. In order to make the scope of journal well beyond Korean Peninsula, a new title ‘Animal Systematics, Evolution and Diversity (ASED)’ has been adopted for accommodation of aspects of evolutionary biology, biodiversity and its conservation in the discipline of animal systematics. The journal will accept original contributions of systematics, conservation biology, and evolutionary biology with a preference of systematic works such as discovery of new taxa, taxonomic reviews and revisions, phylogenetics and population genetics, biogeography and phylogeography, and biodiversity studies concerning animal taxa of East Asia. ASED publishes four times a year and manuscripts are accepted only through its online submission and review system in English (http://e-ASED.org).

ASED will succeed the tradition of KJSZ as the official scientific journal of KSSZ, but also assume a new role as the central medium to rapidly disseminate scientific discovery in East Asian region in the field of animal systematic, evolution and diversity. Please inform your colleagues about the launch of ASED.

Hang Lee and Chang-Bae Kim
Editors-in-Chief
Animal Systematics, Evolution and Diversity (ASED)
