Abstract
In the scene of an offense, fingerprint can be presented as a decisive evidence. To extract fingerprint is the most basic investigation technique because if someone is 18-year-old adult, they have to do fingerprinting compulsorily. There are various kind of way to detect fingerprint, contrarily few photographing techniques of fingerprint. In that research, we settled the problem by means of newish products. At first, we make the lighting for fingerprint photography. Second, we developed the program which makes fingerprint photography more sharp. Those two instruments are more convenient than the ways already existed. Those are very helpful for initial investigation because of a taking a fingerprint photography in a short time. Because it is also easy to use and cheap to make, it can be mass-supplied.
