In the twentieth century, advances in technology, from refrigeration to sophisticated ovens to air transportation ① that carries fresh ingredients around the world, contributed immeasurably to baking and pastry making. At the beginning of the twenty-first century, the popularity of fine breads and pastries ② are growing even faster than new chefs can be trained. Interestingly enough, many of the technological advances in bread making have sparked a reaction among bakers and consumers ③ alike. They are looking to reclaim some of the flavors of old-fashioned breads that ④ were lost as baking became more industrialized and baked goods became more refined, standardized, and—some would say—flavorless. Bakers are researching methods for ⑤ producing the handmade sourdough breads of the past, and they are experimenting with specialty flours in their search for flavor.

The term objectivity is important in measurement because of the scientific demand that observations be subject to public verification. Oxygen is what it is all about. Ironically, the stuff that gives us life eventually kills it. When a concert violinist (A) was asked the secret of her success, she replied, “Planned neglect.” Then she explained, “When I was in school, there were many things that (B) were demanded my time and energy. When I went to my room after breakfast, I made my bed, straightened the room, (C) dusted the floor, and did whatever else came to my attention. Then I hurried to violin practice. I (D) found I wasn’t progressing as I thought I should, so I reversed things. Until my practice period was completed, I deliberately (E) neglected everything else. That program of planned neglect, I believe, accounts for my success.”
