

Gas Pump

created/diagrammed by Alec Fehl 5/14/99-5/16/99

1] Precr ease into 8ths.
Flip over.

2] Crease through only
three squares.

3] Add in valley folds.
Flip over.

4] Collapse on existing
creases.

5] Valley fold single ply
and turn tip inside out. You
will have to partially unfold
model to do this.

6] Valley one layer and squash
the end.

7] Swing down gas hose.

8] Valley to thin hose.

9] Swing hose
back up.

10] Repeat steps 6 - 10.

11] Crease.

12] More creases.

13] Pleat symmetrically.
The bottom mountain is new.
The other three folds are
existing creases.

14] Crease to re-emphasize.

15] Fold one panel behind.

16] Crease 45 .

17] Valley where creases
intersect edge underneath.

18] Unfold panel.

19] Flip over.

21] Fold panel over while collapsing pyramid. The inside will resemble a water bomb base when through. See next step for desired effect.

22] ...like this. Unfold panel and flip over.

23] Repeat steps 16-22 three more times.

24] Unfold pleats and swing hose down.

25] Fold over three edges. The tip will not lay flat.

26] Rabbit ear hose and swing back up.

27] Refold pleats. Flip over.

28] Crease top diagonals. Petal fold side. Repeat on left.

29] Refold hidden water bomb bases as you form a tall open-ended box. Bring left side over top of right side.

30] Continue to form box. Tuck ridges A and B under flaps C and D to almost hold it together.

31] Collapse top on existing creases. See next step for finished top view.

32] Nothing to do here, but the top should lock and look like this.

33] Fold bottom 5 edges underneath. The front has two edges that will overlap and lock the bottom. Thin nozzle with valley fold.

34] Pinch and curl hose. Form nozzle with reverse folds.
