future by arranging itself to deal with a range of possible futures; but incremental changes to structures designed for an earlier age may not achieve this. Scenario planning techniques make it possible to "think aloud" about the co-evolution of governmental institutions with the environment in which they operate, and open up the possibility of steering that process better by thinking about different possible futures. When other actors adopt new global ways to organise, co-ordinate, and achieve agility at scale, what should be the response of government?

Keywords: globalisation, scenario planning, ethics, sustainability, government, trade, **industry**, policy
